- Moisturize: Soothes and softens dry skin.

Alcohol Formulation Sanitizing Wipes

Ref No.	Size	Packing
Md1520030	15x20cm	30pcs/Canister

Ingredients:

Benzalkonium chloride, C12-14 alkyl dimethyl ethylbenzyl ammonium chloride, Didecyldimonium Chloride, Alkyl polyglucoside, Disodium EDTA, Propylene glycol, Aqua

Directions for use:

1. Open cap.
2. Draw wipe upwards until next wipe is visible.
3. Pull wipe sideways to detach.
4. Close cap firmly to prevent wipes from drying out.

Warnings

For external use only.

Keep out of eyes.

In case of eye contact, rinse with water.

If irritation develops, discontinue use. Consult a doctor if irritation persists more than 72 hours

If swallowed, seek medical attention or contact a Poison Control Center.

Keep out of the reach of children, except with adult supervision.

Newborn Baby Wipes

They are a tad more expensive than the Grocery store varieties you can get but they are very good at what they do, on opening the pack you should note three things listed below:

1. Appearance Moist non-woven wipe
2. Odour Slight green tea perfume
3. Non -alcohol smell, as there is not any in them to begin with.

They keep moist for longer than the other household brands. The dispensing of the wipes is relatively trouble free. My family and I would highly recommend them.

Step 9 – Discard all the used wipes in the bin and let your body air dry

Step 10 – You may feel a sticky sensation – this is the chlorhexidine binding to your skin. After a few minutes this sensation will go away.

- Antimicrobial premoistened hand wipe
- With 62% ethyl alcohol
- Reduce the number of germs on hands
- Plastic canister keeps moisture
- Lint-free to leave hands clean
- Contains no fragrance or dye

Bed Bath Wipes

Bed Bath Wipes are a simple, rinse-free bathing solution designed to clean and moisturise all the areas of the body in one easy step.

Conveniently replacing the more traditional methods of bed bathing such as; preparing bowls, wash cloths, water, soap, lotions and towel drying; they are also cost effective - reducing laundry bills and nursing time.

The wipes are dermatologically tested, alcohol and lanolin free, and contain a patented pH neutral formula with aloe vera and added moisturisers to promote healthy, soft skin.

- Individual patient packs for reducing cross contamination
- Reduces the risk of lift and carrying heavy bowls of water and the risk of slipping on wet floors.

1. What makes our Bed Bath Wipes better than other bed bath wipes currently on the market?

Bed Bath Wipes are the best value bed bath wipes available to hospitals and contain a patented formula. They can be microwaved to give a patient a warm bed bath experience.

2. How do you microwave the wipes?

Place the whole pack of wipes in the microwave on a setting of about 750W for 15 seconds. Please ensure the wipes are not too hot before using them on the skin.

3. What format does the wipe come in?

The wipe comes in a pack of 10 wipes whereby one wipe is used on a different part of the body. The wipes are sufficient to cover the whole body, so one pack is designed for one bath as this reduces cross contamination.

4. How will using this product benefit a hospital?

This product is designed to save time and money when giving a patient a bed bath. It does this by replacing the need for the cumbersome traditional methods of giving a bed bath which includes preparing bowls, washcloths, soap, lotions and dry wipes. The Bed Bath Wipes will decrease waste, save money, save time and increase staff compliance.

Medical Surgical Face Masks

What Is a Face Mask?

- Face masks are sold as surgical masks, dental masks, medical procedure masks, isolation masks, or laser masks. There are several designs; some tie around the head, some have elastic bands around the head, and others have ear loops.
- Washable, reusable face masks should be used only if disposable masks are not available. But none of these reusable masks has been evaluated by the FDA and none can legally be sold to protect against disease.
- N95 respirators are face masks that fit more tightly to the face. They filter out 95% of small particles when correctly fitted, although this isn't easy to do in the home setting.
- Bottom line: Nobody knows whether face masks or respirators really protect against flu. The recommendations below, from the CDC, are experts' best guesses as to the best way to use them.

- Quality Medical Supplies
- Made By Industry Leader In Quality Medical Supplies
- Latex free
- Pleated earloop procedure masks with glass-free filter
- Disposable - Safe - Great for 1 Time Use
